

# Double Lock

## ARCHITECTURAL ROOFING

Effective September 2007

### ALLOWABLE GRAVITY UPLIFT LOADS (PSF)

substrate	width	3.0'	3.5'	4.0'	4.5'	5.0'
24 ga. steel	12"	163	120	92	73	59
24 ga. steel	18"	109	80	61	48	39
.032" alum.	12"	83	61	47	37	30
.032" alum.	18"	53	39	30	23	19

### DESIGN INFORMATION

The minimum panel width for tapered panels is 1 1/2" and the maximum panel width is 20". The maximum length for such panels is 40'.

Double Lock panels must be installed on a solid substrate.

The minimum recommended roof pitch is 3:12.

Maximum panel length is 65'.  
Minimum panel length is 4'.

#### Notes:

1. Allowable loads are based on 1980 edition of AISI specifications.
2. Deflection is limited to L/240 of span.
3. Loads are based on spans of 3 or more.
4. FY = 50 ksi for steel panels.
5. Uplift values based on attachment to 16 ga. purlins with 2 #10-16 x 1" SD ST screws.

# DOUBLE LOCK SPECIFICATIONS

## PART I GENERAL

### 1.01 SUMMARY

- A. Section includes: all material, labor, and equipment to complete installation of Double Lock as shown on the drawings and herein specified. Include all copings, gutters, and flashings contiguous with the panels.
- B. Related Sections
  - 1. Metal decking
  - 2. Rough carpentry, plywood, and underlayment
  - 3. Insulation
  - 4. Membrane roofing
  - 5. Flashing and sheet metal
  - 6. Joint sealers: sealants and caulk
  - 7. Structural framing.

### 1.02 REFERENCES

- A. American Society for Testing and Materials (ASTM)
  - 1. ASTM A 653: Steel Sheet, Zinc-Coated by the Hot Dip Process
  - 2. ASTM A 792: Steel Sheet, Aluminum-Zinc Alloy Coated by the Hot Dip Process.
  - 3. ASTM B 209: Aluminum and Aluminum Alloy Sheet and Plate.
- B. Sheet Metal and Air Condition Contractors National Association, Inc. (SMACNA)
  - 1. SMACNA Architectural Sheet Metal Manual, 1993 Edition.
- C. American Iron and Steel Institute (AISI)
  - 1. AISI Cold Formed Steel Design Manual
- D. Aluminum Association
  - 1. Aluminum Design Manual
- E. Metal Construction Association (MCA)
  - 1. Preformed Metal Wall Guidelines
- F. Code references
  - 1. ASCE, Minimum Loads for Buildings and Other Structures
  - 2. BOCA National Building Code
  - 3. UBC Uniform Building Code
  - 4. SBC Standard Building Code

### 1.03 SYSTEM DESCRIPTION

- A. Performance Requirements: Provide factory formed, prefinished, mechanically seamed, concealed clip, architectural standing seam metal roof system, that has been pretested and certified by manufacturer to comply with specified requirements under installed conditions.
- B. Structural Requirements: Engineer panels for structural properties in accordance with latest edition of American Iron and Steel Institute *Cold Formed Steel Design Manual*, using "effective width" concept.
- C. The panels shall be installed over a solid deck.

### 1.04 SUBMITTALS

- A. Product Data: submit manufacturer's specifications, standard profile sheet, product data brochure and finish warranty.
- B. Shop Drawings: shop drawings showing roof plan with layout of panels, clips, clip attachment, underlayment and sections of each flashing/trim condition shall be submitted for approval prior to fabrication. Drawings shall contain material type, metal thickness and finish. Drawings shall distinguish between factory and field fabrication.
- C. Samples:
  - 1. Submit sample 12" long x full width panel, showing proposed metal gauge, seam profile and specified finish.
  - 2. Submit manufacturers standard colors for Architect's selection.
- D. Certification: Submit manufacturer's certification that materials and finishes meet specification requirements.

### 1.05 QUALITY ASSURANCE

- A. Panel manufacturer shall have a minimum of ten (10) years of experience in manufacturing architectural roofing in a permanent stationary indoor facility.
- B. Panel installer shall have a minimum of two (2) years experience in the installation of concealed clip architectural standing seam metal roofing and show evidence of successful completion of at least three (3) projects of similar size, scope, and complexity.

### 1.06 DELIVERY, STORAGE, and HANDLING

- A. Panels and flashings shall be protected and properly packaged to protect against transportation damage in transit to the jobsite.
- B. Upon delivery, exercise care in unloading, stacking, moving, storing, and erecting panels and flashings to prevent twisting, bending, scratching, or denting.
- C. Store panels and flashings in a safe, dry environment under a waterproof covering to prevent water damage. Allow for adequate ventilation to prevent condensation. Panels and flashings with strippable film shall not be stored in direct sunlight.
- D. Upon installation immediately remove strippable film from panels and flashings. Protect panels and flashings from foot traffic and from all other trades.

### 1.07 PROJECT CONDITIONS

- A. Field dimensions shall be taken prior to fabrication to verify jobsite conditions.

### 1.08 WARRANTIES

- A. Panel manufacturer shall provide a twenty (20) year warranty on the paint finish covering chalking, cracking, checking, chipping, blistering, peeling, flaking, and fading.
- B. Applicator shall furnish written warranty for a two (2) year period from date of substantial completion of building covering repairs required to maintain roof and flashings in watertight conditions.

## PART II PRODUCTS

### 2.01 PRODUCT DESCRIPTION

- A. Double Lock structural standing seam roof system as manufactured by Fabral, 3449 Hempland Road, Lancaster, PA 17601, ph.: 800-477-2741; fax: 800-283-4289.
- B. Panels: The Double Lock panel shall be formed as 1½" seam height with a seam spacing of 12", 16", or 20" on center.
- C. Roof panels shall use a two-piece roof clip allowing for thermal movement of the panel system.
- D. The panel shall be mechanically seamed with a field-operated, electric-seaming machine provided by the manufacturer.
- E. The panel system shall be as a true standing seam shape requiring no trapezoidal foam closures, plugs, or fillers at eaves.
- F. The maximum panel length shall be 40' (consult with factory for longer lengths).
- G. This panel shall be installed over a solid deck only.

### 2.02 PRODUCT SUBSTITUTIONS

- A. Requests to use alternate systems shall be submitted in writing to the project designer at least ten (10) days prior to bid date. Request shall demonstrate proposed substitution meets or exceeds specified performance requirements. Certified statements, samples and descriptive data shall be included in this submittal request.
- B. Manufacturers listed in this section are pre-qualified manufacturers. Substitution of manufacturer's products for those specified shall not be allowed at anytime during construction.

# DOUBLE LOCK SPECIFICATION

## 2.03 MATERIALS AND FINISHES

- A. Roof panel materials
  1. 24 gauge, Grade 50 (50 ksi yield strength) structural steel with G90 (0.90 oz./ft.<sup>2</sup>) hot dipped galvanized coating, both conforming to ASTM A 653.
  2. 24 gauge, Grade 50 (50 ksi yield strength) structural steel with AZ50 (0.50 oz./ft.<sup>2</sup>) aluminum-zinc alloy coating, both conforming to ASTM A 792.
  3. 0.032", 3105-H14 or equal (20 ksi yield strength) conforming to ASTM B 209.
- B. Texture: panels shall be smooth.
- C. Finish: paint shall be full strength 70% polyvinylidene fluoride (Kynar/Hylar\* fluorocarbon) baked-on coating, factory applied prior to roll forming. The treatment shall be a two-coat system consisting of a single coat of 0.2 mil primer followed by a finish coat of 0.8 mil Kynar topcoat with a total dry film thickness of 1.0 mil ± 0.2 mil. The reverse side of the panels shall be treated with a back coat system consisting of a 0.2 mil primer with a 0.3 mil topcoat for a total dry film thickness 0.5 mil.

## 1.07 ACCESSORIES

- A. Concealed roof clips:
  1. 2 pc.: 18 ga. sliding UL90 rated clip designed for thermal movement.
  2. 1 pc.: 18 ga. fixed clip (for use with short panel lengths only).
- B. Flashing and Trim
  1. All flashing and trim shall be of the same material, gauge, finish, and color as the roof panels and fabricated in accordance with standard SMACNA procedure and details.
  2. Provide transition rib covers where roofing changes pitch.
  3. Fabricate gutters and downspouts in the same gauge, material, finish, and color as the roof panels.
- C. Fasteners
  1. Clips to substrate: Screw shall be #12 or #14 diameter, self tapping type, zinc-plated steel.
  2. Flashings to panels: exposed screws shall be zinc plated with a #14 x 7/8" combination steel and neoprene washer, color to match panel.
  3. Pop rivets: #43 stainless steel, color finish to match panel.
- D. Sealants
  1. Shall not contain oil, asbestos, or asphalt.
  2. Factory applied sealant shall be applied in the seam and designed for metal to metal concealed joints.
  3. Field applied panel end sealant shall be mastic tape sealant.
  4. Exposed sealant shall be one-part polyurethane joint sealant. Coordinate color with roof panels.
- E. Closures
  1. Ridge and hip closures shall be protected and supported by a formed metal closure manufactured from the same material, color, and finish as the panels.
  2. Metal closures shall be factory-fabricated and field-cut as needed.
- F. Vapor Retarder:
  1. Retarder with a permeance of 0.05 or less as determined by ASTM E 98.

## 2.05 RELATED MATERIALS

- A. Refer to other sections listed in Related Sections paragraph for related materials.

## 2.06 FABRICATION

- A. Roof panels shall be formed in continuous lengths.

- B. Panels shall to be roll formed on a stationary industrial type rolling mill to gradually shape the sheet metal. Portable rollformers, rented or owned by the installer, are not acceptable.

- C. Fabricate flashings from the same material as the roof system.

## 2.07 SOURCE QUALITY

- A. Source Quality: obtain metal panels and accessories from a single manufacturer.
- B. Fabrication tolerances: follow tolerances in MCA's Preformed Metal Wall Guidelines.
- C. Tests and inspections
- D. Verification of performance

## PART III EXECUTION

### 3.01 MANUFACTURER'S INSTRUCTIONS

- A. Compliance: Comply with manufacturer's product data, including product technical bulletins, product catalog installation instructions, and product cartons for installation.

### 3.02 EXAMINATION

- B. Installer shall:
  1. Inspect roof purlins and/or roof deck to verify that it complies with shop drawings and is smooth, even, sound, and free of depressions.
  2. Report variations and potential problems in writing to the architect.

### 3.03 INSTALLATION

- A. Conform to the standard set forth in the SMACNA architectural sheet metal manuals and the approved shop drawings detailed for the project.
- B. Install panels plumb, level, and straight with the seams parallel, conforming to the design as indicated.
- C. Install panel system so it is watertight, without waves, warps, buckles or distortions, and allow for thermal movement considerations.
- D. Abrasive devices shall not be used to cut on or near roof panel system.
- E. Apply sealant tape or caulking as necessary at flashing and panel joints to prevent water penetration.
- F. Remove any strippable film immediately upon exposure to direct sunlight.
- G. Hand-crimp seams at each clip or mechanically seam before workers stand on panels.
- H. Seam panels together with electric-powered seaming machine supplied by the panel manufacturer for a weathertight seam.
- I. Vapor retarder: The joints, perimeter, and all openings shall be sealed per the manufacturer's instructions to provide a continuous vapor retarder.
- J. Underlayment (solid substrate):
  1. Provide one layer of 30# felt with horizontal overlaps and endlaps staggered between layers.
  2. Provide ice and water shield membrane at all valley and eave conditions as well as any area at less than a 3:12 slope.
  3. Lay parallel to ridge line with 2½" horizontal laps and 6" vertical laps.

### 3.04 CLEANING

- A. Dispose of excess materials and debris from jobsite.
- B. Remove filings, grease, stains, marks, or excess sealants from roof panel system to prevent staining.
- C. Protect work from damage from other trades until final acceptance.
